DETAILED ACTION

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 13-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In particular, the specification does not describe and thus does not support of for the subject matter “a combining circuit for inserting unused data” as recited in claims 13, line 4.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 1, the recitation “receiving an output data from the arithmetic logic unit and the register”, lines 5-6, is indefinite as to how a data is received from two different sources, and thus it is also indefinite to what “said received output data”, line 8, is; claim 7 also has the same problem. Further, on line 4, “the data” should be - - a data - -.

As per claim 13, the function of the “combining circuit” as recited in the claim appears misdescriptive as being not supported in the specification.

Art Unit: 2193

4. Applicant's arguments filed on 11/23/2006 have been fully considered but they are not persuasive with respect to claim 13 .

Applicant's argued that the claimed features can be found on page 20, lines 15-25 of the specification, which describes that non-arithmetic data is added to generate output data by combining circuit 29 of Fig. 1 . However, it is respectfully submitted that the "unused data" and "non-arithmetic" as disclosed are not the same. It is clearly disclosed on page 20, lines 22-23, that the "non-arithmetic data" is the high-order 8 bits stored in the first memory block 19 as illustrated by the shaded part I3 in figure 13, whereas the "unused data" and R2 are the low-order 8 bit. Therefore, the cited portion does not provide support for the claimed features.

Applicant's arguments with respect to claims 1 and 7 have been considered but are moot in view of the new ground(s) of rejection.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2193

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
